Wiring of RF* Motor 4285P with Mechanical Limits (2-wires, 2nd Generation):

*) RF = Radio Frequency Remote Control; Motor 4285P is the RF version of Motor 4280P

On some coaches the color of some wires may be different than shown below; for any questions regarding this, either contact your OEM’s service department or Auto-Motion Shade technical services.

Please note that RF remote controlled motors are not recommended for cockpit shades, unless specifically authorized by your OEM for vehicles equipped for handicap use.

This motor cannot be used in conjunction with a dash switch; if a dash switch is desired in addition to the remote control feature, a regular motor 4280P with separate RF module 216P will have to be used instead of motor 4285P shown above.
